

FM RADIO ANTENNA

FM 360°

The sleek profile of the FM 360° houses panoramic reception of FM radio broadcasts. Improvements in element technology have resulted in a compact design smaller than possible with legacy antennas. At just the fraction of the size of traditional antennas, this cutting-edge design efficiently captures standard FM radio frequencies between 88-108 MHz at levels necessary for the most reliable HD radio reception.

The FM 360° is a high-performance antenna with an extended range of over 55 miles and a peak gain of 3.2 dBi. This exceptional power provides reception of the most distant FM stations.

The polished aluminum body construction presents a contemporary look and is weatherproof by design to resist corrosion.

Antennas Direct warrants your FM 360° Antenna for the lifetime of the product.

FM 360°

- FM Frequencies:
88 - 108 MHz
- Max Gain:
3.2dBi
- FM Range:
55 Miles +
- Impedance:
75 Ohm Output
- High Gain For HD Radio Reception
- Lifetime Warranty
