

VARIABLE ATTENUATOR

Reduces HDTV Signal Strength

Living close to transmitting towers can cause multi-path interference. The Variable Attenuator allows you to dial down the signal. Easy installation and easy to use.

INSTALLATION:

Turn the knob fully clockwise for minimum attenuation and maximum signal.
Adjust counterclockwise to attenuate and to reduce signal power.

Helpful Tips:

- Each rotation is equal to approximately 4-6 dB of attenuation.
- Do not turn knob past the stop. Doing so will damage the unit.
- Use the screw provided to mount to any hard surface.
