**Quick Start Assembly/Installation Instructions**

**CLEARSTREAM™ 5**

Before permanently attaching the antenna to any surface, TEST RECEPTION in that location.

Before beginning assembly, make sure all parts needed are present.

**Tools Required:** 42 Phillips Screwdriver and Adjustable Wrenches

**NOTICE:** Coated Cable and Antenna Mast are included in this kit.

---

**Assembly:**

1. Insert the Spacers (3) into the front of the Reflector Assembly (2) and secure them using the Screws and Washers (6).
2. Align the back of the Antenna Element (1) with the Spacers (3) and secure using the remaining Screws and Washers (6).
3. Insert the U-bolts (5) through the top and bottom of the Reflector Assembly (2). Add a Mast Clamp and Back Plate (6) to each U-bolt (5), and loosely screw on the Wing Nuts (8).

**Heads-Up Note:**

Before permanently installing your antenna in any surface, check the signal reception by temporarily connecting coaxial cable to your antenna and then to your television. Follow the instructions in your TV owner’s manual to change the input from “CABLE” to “ANTENNA,” or “BROADCAST” using the TV’s remote control. Press channel 3 or 4.

If reception is not as desired, move the antenna and rescans for the available channels.

---

**Installation:**

1. Mount the assembled antenna by sliding the Mast Clamp (8) onto the Antenna Mast.
2. Aim the front of the antenna toward the broadcast towers. Wall antenna point (4) to locate the broadcast towers near you.
3. Tighten the Wing Nut (8) to secure the antenna onto the Antenna Mast.
4. Thread one end of the coaxial cable into the connector located at the bottom of the Antenna Element (1).
5. Thread the other end of the coaxial cable into the antenna input of the Wirewrench box.
6. Perform a channel scan on your “Wirewrench” box for the available channels.

---

**Troubleshooting:**

**Problem:** I’m not getting any signals at all.

**Possible Cause:**

1. Analog-only televisions manufactured before 2007 need a digital converter box. You MUST perform a channel scan on the converter box.
2. A Digital TV must be programmed to receive digital channels.
3. A TV must be set to the proper input source. Select the proper input through the input menu, or use the remote control (1). A TV may be labeled “Antenna”, “Ant”, or “Cable”.
4. Within the Setup menu, select channel setup or channel scan.
5. You may need to refer to your TV owner’s manual for instructions.

**Problem:** I’m not getting any channels except for one.

**Possible Cause:**

1. You may need to reorient the TV tuner or converter box.
2. The channel you are not receiving may be a terrestrial tower on the broadcast tower, or on a different tower than the other transmitters and your box of signal is obstructed. Try moving the antenna or moving to another location. Repeat as needed.

**Problem:** I’m not getting signal strength, but I’m only two miles from the broadcast towers.

**Possible Cause:**

1. Your TV may be receiving interfering signals. A large metal object near your TV and the local broadcast towers may need a longer range omnidirectional antenna. Antennas Direct offers many models for this purpose.
