

## ANTENNAS DIRECT® DB4e

Welcome the new DB4e. This all-new antenna design features improved performance and extended range capabilities.

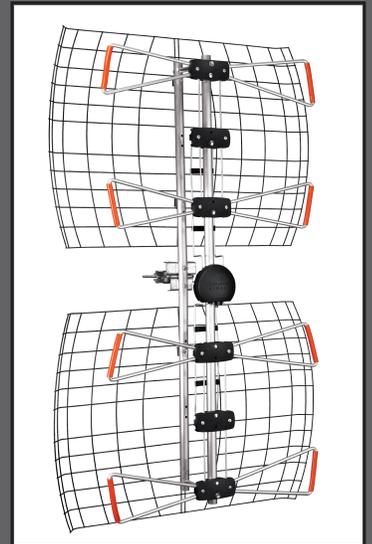

Antennas Direct® raises the power again of traditional bowtie designs: a new breakthrough in performance and reliability. We have created an antenna the size of our traditional DB4 with the performance of the DB8. No other bowtie antenna in its class can match the DB4e's combination of power, gain and value.

With its added gain of 14.5 dBi, the DB4e is one of the strongest multidirectional antennas in the world. The redesigned mesh reflectors now give a front-to-back ratio of greater than 18 dB. The unique bowtie design, exclusive to our line of antennas, provides solid UHF performance. The DB4e is specially designed for core UHF spectrum. With the upgrades in this line, the gain will be significantly higher and the design is more compact, thus expanding options for placement of the antenna.

The DB4e multidirectional antenna is great for outdoor and problematic areas, such as attics and basements. The antenna is easy to assemble and can be roof mounted. Range is rated up to 65 miles, making it ideal for those in locations that can pull long range signals from various directions.

### ANTENNAS DIRECT® DB4e

- Range: Up to 65+ miles
- Peak gain: 14.5 dBi
- Front to back ratio greater than 18 dB
- Strong performance across DTV spectrum
- All weather Balun included
- Flexible aiming characteristics, 60° Beam-width
- Works great in attics
