

ANTENNAS DIRECT® DB8

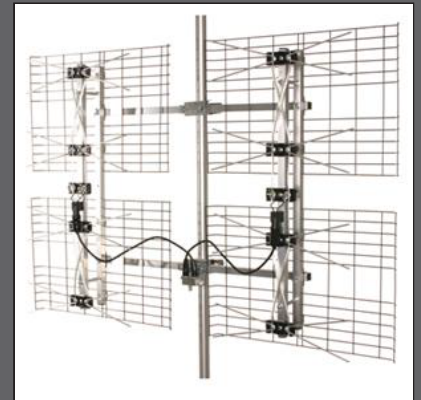

Intended for people at great distances from the transmitters, the DB8 is our most powerful multi-directional HD antenna.

With its added gain of 15.8 dBi, the DB8 is one of the strongest multidirectional antennas in the world. This DB8 is the ideal antenna for use in locations that can pull long range signals from various directions and offers an attractive alternative to using a directional antenna mounted on a rotator.

The bow tie design of the DB8 uses triangular elements instead of rods to greatly increase the bandwidth allowing it to cover the entire UHF band. Additionally, the mesh reflector of the bowtie is more efficient than a rod reflector, is lower in weight, and provides less wind resistance for greater performance and durability.

ANTENNAS DIRECT® DB8

- Range: Up to 70 miles or more
- Impedance 75 ohm
- Max Gain 15.8 dBi
- Weatherproof construction
- High gain across entire UHF band (UHF channels 14-69)

SKU #	Master Carton	Item Description	Retail
8DXB	5	Extreme Range, Multi-Directional 'Bowtie' UHF Antenna	\$89.99
