Avant de rendre, appelez pour apprendre.

Before permanently attaching the antenna to any surface, TEST RECEPTION in that area. Connect coaxial cable (sold separately) to the F-Connector on the Antenna Spine (2). Pull the weather boot over the connection. Connect the opposite end of the coaxial cable to your TV or converter box.

HELPFUL TIP: IT’S IMPORTANT TO CHECK THE RECEPTION IN THE LOCATION WHERE YOU INTEND TO INSTALL THE ANTERNA PRIOR TO ATTACHING THE J-MOUNT MAST TO ANY SURFACE.

Before installing the antenna on the J-Mount Mast (6), adjust the mast, as shown in a vertical position. You will need to adjust the antenna after it is mounted for the best reception.

Follow the instructions in the owner’s manual of your TV or converter box to change the input from ‘CABLE’ to ‘ANTENNA’, ‘AIR’, or ‘BROADCAST’.

Paint the front of the antenna in the direction of your TV stations’ broadcast towers and check reception by scanning for channels. If you are not receiving all of the available channels, move the antenna and rescan.

INSTRUCTION ON THE J-MOUNT MAST
Required: Coaxial Cable (sold separately), Antenna Spine, Power Drill, 5 mm Drill Bit, 8 and 10 mm Ratcheting Drivers, and a 40 Philips Screwdriver

INSTALLATION ON THE J-MOUNT MAST

To add the mounting hardware, assemble the hardware, as shown, and use the Mast Clamp Bolts (9) to secure.

Before installing the antenna on the J-Mount Mast (6), by positioning the Mast Clamp (16) around the mast. Tighten the Wing Nuts (11) to secure the antenna to the mast.

J-MOUNT INSTALLATION

Attach the J-Mount Mast (6) to the Mount Base (14) with the Hex Bolts and Nuts (12), as shown above. Mark the Mount Base (14) position on the desired surface and drill pilot holes, 40 mm deep, for each of the 50 mm Screws (13). Place the Sealing Pads (15) over the pilot holes, and the Mount Base (14) on top of the Sealing Pads. Tighten the 50 mm Screws (13) to secure the base to the surface.

6. You may have loose coastal cable connections. Check ACI connections for a tight fit and check all outdoor connections for moisture or corrosion.

7. Indoor Use: Building materials such as brick, metal siding, radiant barrier, or obstacles can greatly reduce the incoming signal. If an attic, move the antenna outdoors. If indoors, make certain the antenna is not aimed into physical obstacles, such as buildings, trees, or a hill. Remember to rescan every time you move your antenna.

Problem: I'm not receiving any channel except for one.

Possible causes:
1. You may need to rescan the TV tuner or converter box. The channel you are not receiving may have its transmitter tower on the broadcast tower, or in a different tower than the other transmitters and your line of sight is obstructed. Try rescaling the antenna or moving it to another location. Repeat as needed.

Problem: I'm seeing signal breakups, but I'm only three kilometers from the broadcast tower.

Possible causes:
1. Your TV may be receiving interfering signals. A large or stronger antenna will not necessarily solve this problem. Consider moving the antenna, making sure it is not located near metal objects or other antennas. If this is not successful, your signal may be too strong and may require the use of an attenuator. Call our helpline or chat with us online at antennadirect.com for an analysis of your area and installation.

We may be able to offer simple solutions.

Antennas Direct® Inc.
Lifetime Warranty

Antennas Direct® Inc. warrants this product against any defects in materials or workmanship for as long as you own the product. No warranty claim will be honored unless, at the time the claim is made, you present proof of purchase from an authorized Antennas Direct® Inc. dealer.

Antennas Direct® Inc. will neither repair or replace the defective product at no charge to you. This warranty covers parts, but does not cover any costs incurred in the removal or reinstallation of the product. This limited warranty does not apply if the products damaged or fails due to misuse, improper installation, abuse, and modification of the product as originally manufactured by Antennas Direct® Inc. Antennas Direct® Inc. will not assume any liabilities for any other warranties, expressed or implied by any other person. The foregoing shall be the sole and exclusive remedy of any person, whether in contract, tort, or otherwise, and Antennas Direct® Inc. shall not be liable for incidental or consequential damage or commercial loss, or for any other loss or damage, as set forth above.

Instructions d’assemblage et d’installation

ClearStream 4MAX™

Connectez l’antenne au téléviseur ou au boîtier convertisseur et effectuez un balayage des chaînes. Si la réception n’est pas satisfaite, déplacez l’antenne et effectuez une nouvelle recherche des chaînes disponibles.

Avant de commencer l’assemblage, assurez-vous que toutes les pièces nécessaires soient présentes.

Câble coaxial vendu séparément.

Pour commencer l’assemblage, suivez les instructions imprimées ci-dessous.

Installation sur le mât

Avant de fixer l’antenne, assurez-vous que le câble coaxial est fixé à la base du mécanisme de rotation du mât.

Pour les installations murales, veuillez consulter la notice d’assemblage de l’antenne fixée au mur.

Pour les installations au mur, utilisez la colle ou des vis pour fixer l’antenne au mur.

Avant d’installer l’antenne sur le mât, assurez-vous que l’antenne est fixée solidement au mât.

Pour les installations au sol, utilisez le matériel de montage fourni avec l’antenne fixée au sol.

Pour les installations au sol, utilisez le matériel de montage fourni avec l’antenne fixée au sol.

Ensemble, ajustez les déportes WIF (11) en utilisant les capuchons de fixation avec des vis de 5 mm (12), comme illustré.

Pour les installations au sol, utilisez le matériel de montage fourni avec l’antenne fixée au sol.

Pour les installations au sol, utilisez le matériel de montage fourni avec l’antenne fixée au sol.
